IN THE CLAIMS

LISTING OF CLAIMS:

1. (Previously Presented) A method of testing a Web Service as a component comprising the steps of:
 - identifying, on a remote system, a Web Service to be tested;
 - obtaining information relating to the Web Service to be tested;
 - generating, from the information, a program to exercise the Web Service to be tested;
 - executing the program to exercise the Web Service to be tested; and
 - obtaining results from the Web Service to be tested.
2. (Currently amended) The method of claim 1 ~~wherein~~ further comprising the step of verifying that said results are correct.
3. (Original) The method of claim 1 wherein said step of identifying includes locating a Web Service descriptor language (WSDL) file for the Web Service.
4. (Original) The method of claim 3 wherein said step of identifying further comprises locating a DISCO file, said DISCO file including a list of WSDL files.
5. (Original) The method of claim 1 wherein said step of obtaining information relating to the Web Service to be tested includes obtaining information relating to the Web Service interface.
6. (Original) The method of claim 1 wherein said step of obtaining information relating to said Web Service to be tested further comprises obtaining information related to the methods of the Web Service.

-4-

7. (Original) The method of claim 1 wherein said step of obtaining information relating to said Web Service to be tested further comprises obtaining information relating to parameters to be passed to said Web Service.
8. (Original) The method of claim 1 wherein said step of executing the program to exercise the Web Service to be tested includes sending and receiving messages with said Web Service.
9. (Original) The method of claim 1 wherein said remote system resides on a network.
10. (Canceled)
11. (Original) The method of claim 8 wherein said messages are in a SOAP protocol.
12. (Original) The method of claim 8 wherein said messages are transported across said network using an HTTP Internet protocol.
13. (Original) The method of claim 8 wherein said messages are in an XML format.
14. (Previously Presented) A computer program product for testing a Web Service as a component, the computer program product comprising a computer usable medium having computer readable code thereon, including program code comprising:
 - instructions for causing a processor to identify, on a remote system, a Web Service to be tested;
 - instructions for causing the processor to obtain information relating to the Web Service to be tested;
 - instructions for causing the processor to generate, from the information, a program to exercise the Web Service to be tested;
 - instructions for causing the processor to execute the program to exercise the Web Service to be tested; and

instructions for causing the processor to obtain results from the Web Service to be tested.

15. (Previously Presented) The computer program product of claim 14 further comprising instructions for causing the processor to verify said results.

16. (Original) The computer program product of claim 14 wherein said instructions for causing a processor to identify includes instructions for causing a processor to locate a Web Service descriptor language (WSDL) file for the Web Service.

17. (Original) The computer program product of claim 14 wherein said instructions for causing a processor to identify further comprises instructions for causing a processor to locate a DISCO file, said DISCO file including a list of WSDL files.

18. (Original) The computer program product of claim 14 wherein said instructions for causing a processor to obtain information relating to the Web Service to be tested includes instructions for causing a processor to obtain information relating to the Web Service interface.

19. (Original) The computer program product of claim 14 wherein said instructions for causing a processor to obtain information relating to said Web Service to be tested further comprises instructions for causing a processor to obtain information related to the methods of the Web Service.

20. (Original) The computer program product of claim 14 wherein said instructions for causing a processor to obtain information relating to said Web Service to be tested further comprises instructions for causing a processor to obtain information relating to parameters to be passed to said Web Service.

21. (Original) The computer program product of claim 14 wherein said instructions for causing a processor to execute the program to exercise the Web Service to be tested

-6-

includes instructions for causing a processor to send and receive messages across a network with said Web Service.

22. (Original) The computer program product of claim 21 wherein said instructions for causing a processor to send and receive messages comprise instructions for causing a processor to send and receive messages using a SOAP protocol.

23. (Original) The computer program product of claim 21 wherein said instructions for causing a processor to send and receive messages with said Web Service comprises instructions for causing a processor to transmit said messages in an HTTP Internet protocol.

24. (Canceled)

25. (Previously Presented) The method of claim 1 wherein said identifying a web service comprises identifying a web service comprising an object-oriented software component accessed via a web protocol.

26. (Previously Presented) The computer program product of claim 14 wherein said instructions for causing a processor to identify a web service comprises instructions for causing a processor to identify a web service comprising an object-oriented software component accessed via a web protocol.

27. (New) The method of claim 1 further comprising load testing of said Web Service, said load testing including varying the load on the Web Service and determining degradation of response time of the Web Service in response to increased load.

28. (New) The computer program product of claim 14 further comprising instructions for load testing of said Web Service, said load testing including varying the load on the Web Service and determining degradation of response time of the Web Service in response to increased load.
